FINANCIAL POLICIES AND ASSIGNMENT OF BENEFITS

I understand that I am financially responsible for all charges for services rendered. I understand that Dr. Cheryl Serr / Amber Health Care for Women will bill my insurance plan and bill me for any remaining balance - such as charges applied towards my decuctible or co-pays, and for services not covered by my insurance plan. I hereby give lifetime authorization for payment of insurance or Medicare benefits to be directly to Dr. Serr for services rendered. I understand and agree to abide by the following practice policies: Co-payments are due at time of service: deliquent balances that remain unpaid beyond 30 days may be assigned late-fee service charge (not to exceed the maximum rate permissible by law); delinquent balances that remain unpaid beyond 90 days will be assigned to a collections agency; patients who are assigned to collections will be dismissed from the practice; the practice reserves the right to charge up to a $150 fee to patients who "no-show" to appointments or cancel with less than 24 hours notice. In the event of default, I agree to pay all costs of collection and resonable attorney's fees. I further agree that a photocaopy of this agreement shall be as valid as the original.

MEDICAL RECOMMENDATIONS

Annual physical exams – Every woman should have a full physical exam once a year, to screen for diseases such as high blood pressure and cancer of the skin, breast, cervix, and ovary. An OB-GYN specialist treats issues such as birth control, pregnancy, PMS, menopause, heavy or painful periods, and pelvic prolapse. If a woman has medical or psychiatric problems, she should also be under the care of an internist, family practice doctor, and/or psychiatrist.

Pap smears – A pap smear looks for cervical cancer and pre-cancer (called dysplasia). In many parts of the world, cervical cancer is the # 1 cancer, but it is rare in the US because of screening with pap smears. Symptoms of cervical cancer include pain, discharge, and bleeding after sex. Pre-cancer may have no symptoms. There are different opinions about how often a woman should have a pap smear. We recommend a yearly pap smear for most women ages 21-64.

Mammograms – Breast cancer and lung cancer are tied for # 1 cancer in women in the US -- The lifetime risk of developing breast cancer is 12% (1 in 8). A mammogram looks for breast cancer. Occasionally a mammogram may miss a cancer, so you may need other tests if you have a breast lump, breast pain, black or bloody nipple discharge, or dense breasts. We recommend monthly self breast exams, and for a woman age 40 and older a yearly mammogram.

Colonoscopy – Colon cancer is the #2 cause of cancer (and cancer deaths) in women in the US -- The lifetime risk of developing colon cancer is 5% (1 in 20). A colonoscopy looks for colon cancer and precancerous colon polyps. A slim, long fiber-optic camera is inserted into the rectum to look at the inside of the colon (the large intestine). Symptoms of colon cancer include constipation, pain, and rectal bleeding. A screening colonoscopy should be done every 10 years after the age of 50), and more often in a high risk patient.

Dexascan – A Dexascan is a scanning x-ray of the spine and hips that looks for osteoporosis (a dangerous thinning of the bones). Osteoporosis is a "silent" disease, with no symptoms until it reaches the point of causing a hunched back or broken bones. A Dexascan should be done periodically in all post-menopausal women, and for certain other high risk patients.

STD testing and condom use – Abstinence from sex is the best way to prevent catching and spreading STDs (sexually transmitted diseases), such as HIV, herpes, genital warts, syphilis, Chlamydia, gonorrhea and hepatitis. Using a condom during sex lowers the risk of catching an STD. Some STDs (like HIV and hepatitis) can also be spread by blood (from transfusions, needle sticks or IV drug abuse). Ask for an STD check if you would like to be tested.

Smoking –Lung cancer is tied with breast cancer for the tied for # 1 cancer in women in the US and is the # 1 cause of cancer deaths. Smoking kills people. Smoking causes heart attacks and strokes (the # 1 cause of death in the US), lung damage (emphysema and COPD), and many cancers, including mouth, throat, tongue, lung, stomach, kidney, bladder and cervix. Smoking in pregnancy can cause miscarriage, preterm labor, a growth-retarded baby, and stillbirth from placental abruption. Smoking around kids causes SIDS (crib death) and childhood asthma. Do not smoke. If you smoke, ask your doctor to help you quit.

I have read the above and understood the recommendations underlined.
